

PALLET COLLARS

Safe transportation of goods on the road, multi-level storage, easy access to products at the warehouse, cost efficiency, and many other advantages make pallet collars the first choice for logistics experts and product manufacturers throughout Europe!

PALLET COLLAR SYSTEM

European standard

Pallet collars have become an effective substitute for rigid crating, wooden boxes and containers of various types. They are the ideal solution for transportation and storage of valuable, fragile, or breakable products of all kinds. When combined with additional fittings, pallet collars provide perfect protection against unauthorised intrusion and damage to cargo.

Adjustable height for packing

A pallet and a few pallet collars is all you need to create a rigid packaging to your desired height, ranging from 10 to 200 cm. You can easily adjust the height of the box or packaging when handling goods.

Convenient installation

Assembling and dismantling container requires no special equipment or effort.

Mobile system

When combined with additional fittings, mobile no-rack storage system is easy to install. It provides easy access to the goods.

Separation into groups

Using dividers inside the pallet collars allows you to store and transport various groups of small items.

3, 6, 9 or 12 sections

Saving volume

When collapsed, unused standard size pallet collars occupy 7 times less volume versus their size when fully operational.

1 pack = 108 collars (2.6 m³) = 18,5m³ of packed products

Saving space

Using plastic corners allows you to safely store up to 5 tons of goods per 1 m².

1 full truck = 2808 collars (68.6 m³) = 482 m³ of packed products

Refunding

Low transportation costs and re-usability of pallet collars allow you to benefit from using second-hand pallet collars throughout Europe.

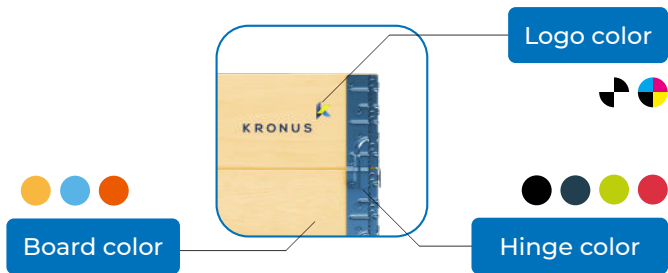

Reliable protection of valuable cargo

Strong and durable design protects valuable and fragile goods.

Compliance with technical standards

Pallet collars have been tested for strength and durability by an independent agency. They conform to LVS EN 13545:2003 standard and approved by TÜV Rheinland. ISPM 15 Certificate allows pallet collars to facilitate transportation of goods around the world.

Personalization

Painted pallet parts and your company logo help identify, track and otherwise organize products in the warehouse, as well as enhance your brand recognition in the market.

Size options

We offer standard pallet collars of 1 200 x 800 mm and also special size collars ranging from 300 to 3500 mm. Pallet collar height can be 100, 200, 300, and 400 mm.

300–3500 mm

6-hinge collar

Collapsing 6-hinge pallet collars saves a lot of space when storing and transporting them. This is very important when warehouse space is limited.

Lids and doors

Lids protect against intrusion. Doors provide convenient access to cargo without dismantling the unit.

Plastic corners

Plastic corners protect products and packaging from damage by reducing the risk of pallet collars shift or fall at multi-level storage.

Labelling and tracking

Special pockets (label holders) allow you to label and track cargo and ensure the integrity and attractive appearance of the packaging.
